

## ABSTRACT

An ointment patch includes a support, an ointment, and optionally, a separator. In this ointment patch, the ointment is coated on one surface of the support in an amount of 0.1mg to 200mg per  $1\text{cm}^2$  of the support, and the support has a thickness of  $1\mu\text{m}$  to  $2000\mu\text{m}$  and 50% modulus of 5g/cm to 600g/cm.
